**Notes:**

Dry comparably to eastern North Dakota this year. Field average moisture in upper teens. Some of the varieties were falling over from stalk quality; indicated by how the hybrid did. The ones that did best were 185-200 bu/a and standing well. Hybrids that stuck out - H4222: we would expect because of standability. H4322 did well; H4542 didn't fare well at all. That was one that had standability issues. H4612 stood and yielded well. H4732 did not fare well. That was not standing. H4653 did okay. H4842 was probably the biggest surprise after not having the best showings in the west after some drought stress; it was exceptional in ND. Monster ear, standing well. East side of plot in a bit of a drainage ditch that influenced H4933 and H4942.
