### TEST COMMENTS:

*This plot was planted on May 1st and was off to a great start, then corn was frosted really hard in late May. A good majority of the plant tissue was light brown to white at the V2 stage. Surprisingly the corn came out of it really well. Most of the growing season saw good heat and rainfall. There was some high wind that came out of the North producing the lodging that you see, but overall it was a good location.*
