

ADD NATURALS & MICROS TO YOUR PLANTER BOX WITH **MAXX NS CORN!**

WHAT IS MAXX NS CORN?

MAXX NS combines Nutri-Cycle, Heat Shield, a carbon technology, Zinc, Manganese, and Iron all into an 80/20 blend of talc and graphite.

What sets **MAXX NS** apart is its Bio-Capsule technology. This ensures the microbes in Nutri-Cycle and Heat Shield are protected until you need them, mixing them right into the planter box.

IF YOU DON'T HAVE AN IN-FURROW SYSTEM OR IF YOU DON'T WANT THE HASSLE OF APPLYING NATURALS AND MICRONUTRIENTS WITH YOUR IN-FURROW SYSTEM, MAXX NS IS THE SOLUTION FOR YOU!

USING THE SYSTEM IS SIMPLE.

Just press the tubes on top of the bucket to dispense products into the container. Then, shake the container to mix the components. Within seconds, your final product is ready for the planter box.

One container of **MAXX NS CORN** covers 50 units of seed.

Heat Shield & Nutri-Cycle Bio-Capsules allow a novel inoculant combination for seed treating that protects plants against abiotic stress and improves nutrient use efficiency.

Nutri-Cycle

18%
ACTIVE CARBON

This unique active carbon feeds and energizes microbial communities while increasing plant respiration and function.

80/20
BLEND OF
TALC &
GRAPHITE

Mn

Fe

IONLOCK™
ZINC

Best-in-class talc/graphite combination ensures optimum flowability performance in today's high-speed planters. The addition of iron and manganese provides a boost to crop emergence and seedling health.

IONLOCK Zinc provides the equivalent of one quart of 9% EDTA zinc per acre.

Visit with your local Hefty Seed Company agronomist for to see how you can bring the yield-enhancing benefits of **MAXX NS CORN** to your planter this spring.
