

# BREAK DOWN CROP RESIDUE

## RELEASE NUTRIENTS FROM ORGANIC MATTER

### WHAT IS D-COMP DRY?

**D-COMP DRY** is a dry formulation packed with fungi, bacteria, and enzymes all targeted at breaking down crop residues and cycling organic matter in your soil. By cycling nutrients through your organic matter, roots of crops have an easier time of accessing available nutrients as they are in organic form.

### COMPONENTS:

**Fungi, bacteria, and enzymes** all targeted at breaking crop residue down or releasing nutrients from organic matter, resulting in:

- Increased biological activity.
- Decreased issues planting into previous year's crop residue.
- Reduced carbon-to-nitrogen ratio.
- Better organic matter conversion.

### APPLICATION GUIDELINES:

- Use 1.2 oz. per acre in residue situations like corn fields with enough water to cover the crop.
- Safe for in-furrow, as well as pre and post crop broadcast for residue control.
